

INTERSTATE SPILL RESPONSE

PAYNE COUNTY, OKLAHOMA

OCTOBER 2022

Rose Rock responded to a call regarding a spill that had occurred alongside Interstate-35 in Stillwater, Oklahoma between two vehicles, one of which was a transport tanker containing liquefied petroleum gas. Rose Rock arrived at the site quickly and assessed the spill. Our personnel began by removing debris from the roadway, placing sphag sorb to all areas with free liquid, and then sweeping and containerizing all absorbent material. Rose Rock then used our in-house remediating agent, EcoGreen, to clean the impacted area. The product was used with a powerwasher over the entirety of the spill. The washwater was then sucked up in order to be properly disposed of. Once remediation was complete, a representative from the Oklahoma Department of Transportation (ODOT) approved the cleanup and reopened the highway to traffic. All collected materials were then taken to a state-certified disposal facility.
