

WASH PIT CLEANING AND WASTE DISPOSAL

OKLAHOMA COUNTY, OKLAHOMA
OCTOBER 2022

A construction supply company retained Rose Rock to provide industrial cleaning and waste disposal services to one of their facilities in Midwest City, Oklahoma. Our team took a sample from the site wash pit and sent it to be analyzed at a state-certified laboratory. Once results were received, the Rose Rock team returned to the site to complete the cleaning and disposal. A hydrovac supersucker, heated power washer with tank, and a transport tanker were among the equipment used to remove the liquids/solids from the wash pit. All collected materials were then transported offsite to be properly disposed of, with a total from the two days of 29,280 gallons of waste. A full project reporting including laboratory results and manifest documents were then provided to the client upon completion.

Consulting • **Field Services** • Products

Spill Response • **Waste Management** • Facility Decontamination • Site Investigations • Transportation Services
