

LDAR SERVICES - OGI SURVEY

OKLAHOMA & TEXAS
AUGUST 2022

Rose Rock was retained by a production and exploration company to perform an OGI (Optical Gas Imaging) survey as part of their LDAR (Leak Detection and Repair) service needs. Our trained personnel also provided SPCC (Spill, Prevention, Control, and Countermeasure) plans as well as pneumatic count services. We completed inspections at 67 sites in the span of one month. These inspections and surveys kept the client's sites in compliance with OOOOa regulations with regards to air and leak detection monitoring.
