

SOIL REMEDIATION

CANADIAN COUNTY, OKLAHOMA

AUGUST 2022

Rose Rock was retained by an exploration and production company to provide soil remediation services at their site in Canadian County, Oklahoma. Our field technicians arrived on site and took fourteen (14) samples at varying depths throughout the impacted area. Those samples were then sent to an Oklahoma state-certified laboratory to be analyzed. Based upon the results, a work plan was created and agreed upon between Rose Rock and the client. Our team returned to the site to begin remediation efforts. A 3% solution of our Salt Remediator treatment agent was used to till and treat the soil in place throughout the impacted area. Once the project was completed, Rose Rock provided the client a full project report detailing the services provided and laboratory results for their records.

Consulting • **Field Services** • Products

Spill Response • Waste Management • Facility Decontamination • Site Investigations • Transportation Services
