

# COMPRESSOR STATION REMEDIATION

CANADIAN COUNTY, OKLAHOMA

FEBRUARY 2023

Rose Rock provided remediation services for a natural gas company for a release that occurred at their compressor station. Absorbent pads were placed around the impacted area to soak up all freestanding liquid and the area was raked and tilled. The site was then treated with Rose Rock's in-house remediation agent, EcoGreen, via a heated power washer. Once remediation was completed, the absorbent materials were bagged, containerized, and transported offsite for disposal. A report including photos documenting the remediation process, information on the used EcoGreen product, and the completed waste manifests was delivered to the client.
