

TRANSPORT TRUCK HYDRAULIC LINE RELEASE

AUGUSTA, KANSAS
NOVEMBER 2022

Rose Rock responded to an emergency call from an emergency services provider for a transport company whose vehicle experienced a release from a hydraulic line. Rose Rock's crew arrived at the site and placed absorbent materials throughout the release. The area was then swept and containerized in a 55-gallon drum, which was later transported to be properly disposed of. The area was then power washed with EcoGreen, our in-house remediation agent. Rose Rock returned to the Site to take samples throughout the impacted area and sent them to a state-certified laboratory to be analyzed and ensure the remediation was successful. A written report with the full analytical results, waste manifest, and photos documenting the remediation process were provided to the client.
