

TANK ROOF CLEANING

MAJOR COUNTY, OKLAHOMA

MAY 2022

Rose Rock was contacted by an independent midstream company to provide services for the cleaning of a 150,000 barrel tank in Northwest Oklahoma. Our in-house, certified confined space entry team entered the tank roof, pre-treated the impacted area with our industrial degreaser product, Eco Degreaser, then power washed the area with our surface washing agent, EcoGreen. Our team then vacuumed up the contaminated water and transported the rinsate offsite to be recycled, following all applicable state and local regulations. Upon completion of the project, Rose Rock provided the client a manifest which detailed the waste removal services we provided. Having our own suite of products, including EPA-certified EcoGreen, available for use benefitted our client as the products were readily available without the need for third-party purchasing, saving both time and money, allowing us to respond quickly.
