

MULTILEVEL LIFT AND TREAT REMEDIATION

GARVIN COUNTY, OKLAHOMA

MAY 2023

Rose Rock provided lift and treat remediation services for a production company in Garvin County. Rose Rock first excavated the impacted area to three feet in depth then tilled and treated the bottom of the excavated trench with Rose Rock's in-house Salt Remediator product. The trench was then backfilled in three separate one foot layers with each layer being tilled and treated with Salt Remediator, resulting in four total layers of remediated soil. Upon completion of the project, Rose Rock provided the client with a report detailing the remediation process including pictures and information on the Salt Remediator product that was used.
